

**Serials Solutions new e-resource management tool for consortia,
groups and library systems**

January 20 – In response to needs expressed by consortia managers and library leaders, Serials Solutions has developed a new 360 Resource Manager service for libraries, consortia, groups, and systems.

360 Resource Manager Consortium Edition addresses the need of consortia and their members to manage costs by more effectively managing e-resource selection, acquisition and analysis. Online tools enable consortia managers to centralize e-resource subscription information and then automatically push resources and metadata to member libraries.

It's easy. It saves time. It improves e-resource management and discovery. And it helps you sell your services to new members.
