

New Client Center Enhancements Increase Performance

March 30 – We continued our commitment to simplify e-resource management by enhancing the Client Center. These improvements provide you with superior performance and will make it easier for libraries to manage resources.

Overview of Client Center Enhancements

All Serials Solutions subscribers will notice a reduction in the time it takes to manage resources due to several Client Center improvements. The following changes result in faster page loads and streamline navigation:

- A “View Data Summary” link on the Client Center home page directs you to all of the “Data Summary” statistics (such as total holdings and total unique titles) that used to appear on this page.
- The Data Management Home page now has pagination by default, rather than a scrolling list of all your databases. You can still see the entire list by selecting the "Show All" button.
- The Database Details page now features clickable hyperlinks for the listed Default URL and Custom URL entries.

A complete overview of these changes is available through the Support Center at http://support.serialssolutions.com/cgi-bin/serialssolutions.cfg/php/enduser/std_adp.php?p_faqid=645.

If you have any questions about your current service, or feedback, you can contact us through the Support Center (<http://support.serialssolutions.com>) or email clients@serialssolutions.com.
